Telescopium Uranicum:

OR,

An Almanack and Prognostication, Physical, Astrological, & Meteorological, for the year of *CHRIST*'s Incarnation

M. DC. LXIV.

Being *Bissextile* or *Leap-year*, and from the Creation of the World, according to the computation of the late excellent Mathematician

JOHN KEPLER, 5657. years.

But after the accurate calculation of the more late learned Physitian and Astrologian

Johannes Baptista Morinus, 5632. years.

And of the *JULIAN* Period, 6377.

A Compleat Ephemerides after a New Method.

Wherein (from the Solar Ingresses into the Cardinal Points) The Eclipses of the Luminaries, The conjunctions and configurations of the Planets, The rising, setting, and culmination of the fixed Stars, is probably conjectured, the temperature and inclination of the Air, and other Astrological observations and predictions, with many useful and necessary Tables inserted, calculated and composed.

By JOHN BOOKER *Student in Astrology and Physick.*

Erravimus Juvenes, emendamur Senes.

Chronagramma Triplex,

O MaIbVs DICo VIgILate, Mar. 13. 37.

QVoMoDo perIIstI Vrbs InCLyta, Ezek. 26. 17.

Et DICet oMnIs popVLVs. flat. flat. Psal. 106. 48.

The Four and thirtieth Impression.

Cum privilegio, & Gratia Regiæ Majestatis.

London, Printed for the Company of Stationers, 1664.

Filia ex lilis, bona filia, peſſima Mater.
Filia ex legis, Mater bona, peſſima Nata.

The Empresse of the Sea, the Moon so bright,
Draws as a Loadstone by attractive might
The Ocean's streams, which this way, that way run,
And by their motions, end where they begun.

The Age of the Moon every day this year, 1664

In the foregoing Table, in the firſt & laſt columns you have the days of the month, and in the column of every month, over againſt each day of any month, you have the age of the Moon, which age being found in the firſt column of either of theſe following Tables, over againſt that age of the Moon, you have the hour and minute of High-water, in any of the places mentioned in the ſaid Tables for that day this year. As for example,

The firſt of January this year the Moon is 14 days old, I would know when it will be high-water that day at London-bridg. I find London Tinmouth, &c. on the other ſide against that 14. day of the Moons age, I find 1 hour and 24 minutes, which tells me it is high water that day at London, &c. at that time. Note that it is high-water every 12 ho. and that the night tide is later then the morning tide of the ſame day 24. minutes of time. Obſerve the like methode in all places mentioned in theſe Tables, which is very eaſie.

These following Tables are very useful, and although they are calculated properly for *London*, yet will serve most places in the South parts of *England*, or indeed any place that lyes between the north latitude of 50 and 52 degrees: The top of every column speaks its own use; yet to make it more plain, take this example. The 1 of *January* it is break of day 4 55 a clock 54 minutes in the morning, Twilight at 6 minutes past 8 at night. The Sun riseth at 8 a clock and sets 4 a clock The day is 8 hours long between Sun rise and Sun set.

	26	night							

And the night in 16 hours between Sun set and Sun rise; the 12 part of the day is 40 min. and that is a Planetary hour, and the 12 part of the night is 1 hour 20 min. and that like wise is a Planetary hour. Observe that the Day begins at Sun rise, and ends at Sun set; but the night on the contrary. For the intermediate dayes, you must make proportion.

The Heavens so framed are,
That they to all declare,
Gods glory doth exceed:

The Skyes and Firmament,
Bright, clear and permanent,
His handy-works do tell.

Day unto day doth teach,
And of the Lord do preach,
His wondrous works relating:
Night unto night doth shew,
That every one might know,
His wisdome them creating.
PSAL. 19.

Venus and *Saturn* do not meet in vain,
Hermes and *Mars* oppose, bring winds and rain.
Jove trines with *Mars*, when th' Lions skin is scant,
The Foxes tayle well piec't, supplies that want.
Tis counted greatest prudence to unite
Councel with Courage, Policy with Might.

This moneths first day, *Mars* and the *Moon* do close,
And both of them dejected, *Sol* oppose:
The *Tartar* is amaz'd, to see the light
Of *Luna* in their Noonsted darkned quite.
They may expect some change, and we shall know
In little time, what that Eclipse did show.

Rome! view the Heavens, for *Mars* thy *Horoscope*
Doth now possess, and's mounted to the top
Of thy Meridian; Poysonous *Scorpio* rising;
At *Sol* his Ingress; strange things are deviſing:
And when to *Mars* his place *Sol* doth arrive,
It is in vain against his force to strive.

This month hath many *Squares* and many *Trines*,
The *Sun*'s oft darkned, and anon forth shines.
The blind may see, and he that runs may reed,
It's bootless 'gainst the heavenly powers to plead.
The air is troubl'd, we that are below,
Feel those effects which they on us bestow.

This moneth hath proved fatal unto *Spain*,
It's to be fear'd, it will be so again.
For who so views the dreadful opposition
Of *Sol* and *Saturn*, and the sad position
Of the Malignants in their square Aspect.
Can speak no lesse in starry dialect.

The *Moons* eclips'd which we shall see at home,
But the effects will chiefly fall at *Rome*.
For now the *Suns* attain'd to *Mars* his place,
As was forespoke, In very little space.
From ceremonious *Italy* shall come
News from the beating of the rattling drum.

Your Harveſt ply, 'tis time, the heavens invite,
Th e Huſband man, whoſe labour they requite,
With copious crops from his well manur'd ſoyle,
Which he deſerveth for his painful royle.
Induſtrious men do often longer live,
Than who themſelves do unto pleaſure g'ive.

A second Spring; The Sun doth warm the Earth,
A fresh, and gives to mankind mikle mirth,
We need not be afraid of storms; the aire
Breathes very gently, and the weathers fair,
But some (whose eyes are sore) do still repine
And murmure when the cheerfull Sun do shine.

An Infidel, an Heathen, Jew, or Turk.
May Christians teach, when to leave off, or work.
Now is the time to sow your fruitfull grain
which is return'd an hundred fold again:
If you negle& untill the rain appears
What you then sow, you'l reap again with teares.

Viewing the vast extensions of the sky
Venus neer *Mars* and *Saturne* I did spy,
Susanna's story came to mind, me thought,
She was most chaste, but both of them were naught.
What they portend, I list not tell, but know,
We shall have troubled aire with rain or snow,

Engl. Accompt.

Now comes old Winter, void of all delight.
With trembling steps, his head or bald, or white,
How can it choose, but show it selfe in kind,
When *Sol* dull *Saturn* in's own house doth finde;
Who, now to us, being niggard of his rayes,
Sayes, keep good fires at home these holy dayes.

♍	*Virgo.* Bowels and Belly.	♓	*Pisces.* Heeles & Feet.

Si malè fortunatus erit, languens vè Planeta,
In signis istis, Membrum quod subditur, anget
Morbo, vel vitio, (reliquis testantibus) ut fert
Ars: quâ sub Cœlo non est divinior ulla:
Sit medò circumspectè tractata atquè perite,
Et non indoctis lucrandi turpiter ausu.

Aspectus Cœli distant moderamine tali
Sextilis, Quartus, Trinus, & Oppositus.

☌ Conjunction is good with good, bad with bad. Distance Signes Degrees.

⚺	Semisextile, Dodecile, indifferent good.	1	or 30	Degrees,
✶	Sextile or Hexagone, very good.	2	or 60	Degrees,
□	Square, Quadrate, Quartile, very bad.	3	or 90	Degrees,
△	Trine, most excellently good and friendly.	4	or 120	Degrees.
⚻	Quincunx, or Quadrasextile, bad.	5	or 150	Degrees.
☍	Opposition, or Diameter, worst of all.	6	or 180	Degrees.

The ⚺, ✶, □, △, and ⚻ are double, *viz.* Sinister according the succession of the Signes, And Dexter against the succession of the Signes; so that with them and the ☌ and ☍ there are 12 radiations, as there are 12 Signs of the *Zodiack* and nomore.

The *Planets*, with the head and taile of the *Dragon*, are thus charactered.

♄ Saturn. ♃ Jupiter. ♂ Mars. ☉ The Sun. ♀ Venus. ☿ Mercury.
☽ Luna. ☊ The Dragons head. ☋ The Dragons taile.

Saturnus *mox* Stella Jovis, Mars, Sol, Venus, Hermes,
ultima Solari lumine Luna *micat.*

Plusit Deus cœlum mirabili quadam scriptura, quam si perfectè possemus legere, perfectè essemus sapientes; Pinxit in facie, in manibus, in habitu totius Corporis, Ingenia, mores, fortunas hominum. Sed nos eam Scripturam aut non intelligimus, aut negligimus, atq; ipsi nos belluis æquamus, quæ ab sensu ducuntur, cum tanta sit mentis excellentia & divinitas.

Will any Man condemn the Husbandman, who by the consideration or observation of the several Soasons of the Year, doth judge of the increase, decrease, plenty or scarcity of all things the Earth produceth. *Benedicta sit ejus Terra Jehovæ: à rebus pretiosis Cœli, à rore et abyssо subjacente: item à rebus pretiosis, proventibus Solis; & à rebus pretiosis, nanqueque Luna protrudit, &c.* Deut. Chap. 33 ver. 14.

Who will blame the Learned Physician, if by the habit of the Body, by touch of the Pulse, inspection of Urine, and other speculations proper to his profession, he give his opinion of the crazines, sickness, life, & death of his Patient.

Do not Grave, Wise, and Learned, experienced Statesmen, and Politicians, by the present State of Affaires, conjecture and divine the future condition of the Republick, and accordingly provide, make wholesome Laws, &c. *Quæ igitur invidia est solis Astrologis impingere crimen impietatis?*

I apollogize thus briefly, before I come to the genuine and proper Astrologicall Observations of this Year; much more might be, but enough heretofore hath been said by my Self and others touching this Subject, and let those and this suffice for the present; only I will move one maine Obstacle out of the way, and that is This: I am much blamed, for inserting here and there *Latine* in my Observations; But, thanks be to God they are not impertinent, or useless, but I am sure are more significant then our Native Tongue can handsomely express, yet may they be properly enough so those, but because being confined to so small a portion of Paper, I often forbear to translate the same: The Learned

and judicious approve thereof, (to whose censure I refer my self;) It is the ignorant, illiterate, and Fanatick sort of People, that know not a B. from a Batledore; who quarrel, and call it the Language of the Beast, I am sure it is the best of Languages at present, and the most professed in all the Christian World, if I should say it is used in the remotest parts of the Earth, some would understand me: The greatest Schollars in *Germany*, *Italy*, *France*, *Spain*, and what other Parts soever, that have emitted into the World, their choice Pieces, have they not been in the *Latine* Tongue? I never saw (nor I think few else have seen,) any excellent Subject discoursed of, but it was in *Latin*, or translated here from: I will say no more on this matter, but wish *Philip Cominæus* a most excellent Historian, conclude this, *Vehementer aliquibus dolet, quod à teneris Annis non fint instituti in Lingua Latina; & hanc suam infelicitatem maximè deplorant*, Where the fault lieth, I know not, sometimes in the Parents, but chiefly in the Children themselves, who naturally prone to sport, and pleasures, neglect that other most necessary thing, *viz.* Learning; *De hac re satis.*

Of the Spring.

Sunt Aries, Taurus, Gemini tria sydera Veris.
Ver prebet Flores, calidum ver fervet & humet.

Upon Wednesday 9th. of *March* this Year 1664. at 8 of the Clock and 16 minutes after, in the night, coming and at *London* the 22. degree, 53. minutes of *Libra*, at which time and moment thereof, the *Sun* entreth the first Scuple of *Aries*, according to *Astronomia Carolina*, lately published by Mr. *Thomas Street*, whom, for many Reasons I now follow, and believe them to be those that are the most accurate Tables extant: Mr. *wing* hath the first minute of *Libra* Ascending, making a difference of two houres and a quarter; I shall not contend thereabouts, but highly commend his laborate paines in his excellent Tables; I only crave liberty and freedome, without any prejudice to Him, or any other, amongst whom some are far wider then he, and yet have done very well. *Amicus Plato, Amicus Aristoteles, sed*

magis

nata *Amica Veritas, & prævalebit.* At this very time the *Moon* is in her last Quarter, or in Sinister square to the *Sun*, and carryeth that malignant Aspect to the Body of *Jupiter*, who is lamentably posited in his Fall in the 3. House, the house secondary of Religion; or as *Agrippa* terms it, *Domus Religionis parvæ*: But that which is notably to be observed, is the opposition of *Mars* and *Venus* from Angles, *viz.* the 10th. and 4 h. Houses, which is of great signification, and chiefly because *Mars* is in the very degree of the Horoscope of *Rome*, as the aforesaid *Agrippa* hath it in his *Pandosion Spiritum*; and *Lucas Gauricus*, in his Treatise of the Geatures of some Cityes, in the second Restauration of the City of *Rome*, hath the 15 degree of *Leo* Horoscopical, the Figure whereof you may see in the said *Gauricus*; This second Restauration was in the 572. years before *Christ*; and the first Building thereof by *Romulus* was 752. years before *Christ*; and then *Libra* 2. degrees did ascend, but now *Rome* is not under *Libra*; there is 180 years difference, between these two times; what reason they have to observe the second Restauration thereof, more then the first Building? I shall not now inquire, but it is the received opinion of their own Writers, and all others as experience hath oft' times manifestly proved true out of mind, that the 15. degree of *Leo* is Ascendant of *Rome*, for which cause, meeting with this notable position, I thought it worth the while, to observe the Face of Heavens there at this time, although some are obstinately opinionated, and say *Rome* will be *Rome* still, and *Mars* passeth by that place every two years, and that no such evil is menaced, as is supposed, nor hath happened to *Rome* at any time, during *Mars* his transiting that place; but let me tell such there hath not been such a position of Heavens at *Rome* since it was *Rome*, as now, if *Rome* be under *Leo*; No not when the wicked Tyrant *Nero* in the 64. year after *Christ* set it on fire which burned 6 dayes; nor in *Vespasians* time in the 80. year after *Christ*, who was called the Delight of Mankind, at which time it burned by fire from Heaven 3. dayes, when the Capitol with many goodly Buildings were consumed by it; nay, of later years, when in the year of

Christ 1527. in the time of Pope *Clement* the 7th. *Charles* the 5th. then Emperour, his Forces besieged it and took it. I may very well say that *Mars* looks over *Rome* (all the Planets being subterranean but himself:) as we in our *English* Proverb have it, *As the Devil looks over Lincoln.*

Quid tantum gradive? parvæ nam mitis in Alto
Jupiter occasu premitur, Veneris{que} salubre
Sydus habet, mutuq; celer Cyllenius hæret,
Et Cœlum Mars solus habet. ———

What great things breeds thou *Mars*; mild *Jove* goes down
Oppressed in Fish, and in the Skyes
The wholsome Star of *Venus* dulled is,
Mercury looseth his swift motion,
And fiery *Mars* rules in the Sky alone,

I have borrowed these verses from *Lucan*, being so pat for the purpose. I will insert the position of Heavens at this time for the *Suns* ingress into *Aries* at *Rome*, and say something thereof, let the success prove how it will, I have no quarrell thereto, nor to his Holyness the Pope so stiled: But the present state of Affaires in Christendome, and the expectation is had of the effects of the Conjunction of *Saturn* and *Jupiter* now at hand, and the approaching concurrence of the famous *Apocalyptical* Synchronical Numbers *666*. I attempted the same without any other designe: *Corpora Cœlestia non agunt in instanti, sed in tempore.* There must be coition and conception, before there can be Generation and Production. *Guido Bonatus* in the 97. Consideration, *Astronomiæ parte primâ, pag. mihi* 150 It is too long to transcribe, gives solid reasons of this observation in the difference of Clymates, whom I have followed, & that is the chief ground and reason, that I have calculated this notable position for the Meridian of *Rome*, I have no malice against it, and therefore I neither fear the inquisition, nor excommunication, nor their cursing with Bell, Book, and Candle; *Procul à Jove, procul à fulmine.* I will only set down the genuine Astrological significations of this position, as it followeth.

We

Suis et ipsa Roma Viribus ruit.

We see here that *Scorpio* the most pernitious, pestiferous, and treacherous sign in the Zodiaque ariseth; it is the cheif house of malignant *Mars*, who now projects his harfull finister square thereto, in oppolition to *Venus*, who casts her square Dexter thereto, then which there can hardly be a worser position, and yet both *Mercury* with his Trine and *Jupiter* with his Sextile seeme to take of the others malignity; but alas they are both of them in a pitifull condition in their falls; and as *Bethen* hath it in his *Centiloquium*, when planets are thus posited, *sunt ut viri ab finibus aut civitatibus suis, & sunt venati & timidi*. *Almansor* saies in his 106. Propolition, *Averte Oculos a figura, in qua Mars fuerit in Angulo, maxime cum fuerit Ascendens Scorpio.* This is our present position, *Averat Deus malis communicandis*; without doubt *Mars* rules the Roast this Year; and he is the worse for being re-grograde. *Guido Bonatus* saies if he be in *Leo* and in the 7th. House, he threatens Warres, contentions, and scarcity of Fruits in the Eastern parts, the death of Men in the strength of age; *Et in habitatoribus terrarum Rusticis atque popularibus ex parte Regis, vel divitum ac potentum.* But this position is at *Rome* in this face of Heavens; And I suppose may well be understood of the Pope, the Cardinals and Prelates, &c. (And it be true as Mr *Gadbury* hath it (in his Collection of Nativities) of this present Pope *Alexander* the 7th. in part 7c. It will be a fatal year to him, upon the direction of the Sun to the opposition of *Saturn*; and the bad Revolution he hath this Year 1664. The evil influence whereof may show it self betwixt the end of *April* and middle of *May*, but this by the way, *Vestigia prima requiro.*) *Significat etiam vulnera, & percussiones gladiorum, atque flavelli, & angustiam ex eis, atque carcerem, & penuriam seu indigentiam victualium, & significat Bella & contentiones de Rebus, quæ non sunt illorum qui petunt ea, nec pertinent ad eos.* The opposition of *Mars* and *Venus* is of very bad signification; and in private Nativities of persons, it hath signification of various lusts,

 adulteryes,

adulteryes, incests, fornication and sodomy, &c. and great misfortune to hang pen to them, that have them thus posted in their Carriages; shall it signifie less to a City or place, who have it in its Revolution? I suppose not, for it is as another Birth to it; I have read that *Rome* is not without 40000. Harlots, Courtesans, &c. and maintained for the most part by the Clergy there, and their Followers; and that the *Romanes* themselves suffer their Wives to go seldome abroad, either to Church, or other place, nay scarcely to peep out of a Lattice window; hence comes the Proverb there,

In Roma vale piula putana, &c. In Rome the Harlot hath a better life,
Che la moglie Romana. Then the that is a Romans Wife.

According to this position, they will be in a 3rd condition, for ☿ and ☽ being in opposition, will punish them with quick expedition; he is Lord of the Ascendant, and she of the 7th. House, he in the 10th. and she in the 4th. with the *Dragons* Tayle, which signifies little less, then that place and the people therein, to be put to great Straights, and suffer much hardship, either by being besieged, invironed, or by some notable Warlike feates and stratagems, &c.

Touching the Moones separating from the square of the Sun to the body of ☿; *Bethem* in the 38. Apho risme of his *Centiloquium* tells you, *Quod accidunt egritudines, sodi itudo, timor, mors, incarceratio, inimicitia mali, & dedecoratio, dolores, casus, egritudo, ligatio captivitas, exilium, exercitus, populus, & res terribiles.* What a heap of mischeifs and miseries is here. *Bethem recte videtur cum praedixisse Ptolemaeus, qui ab hoc tantis quadratis radiationem pulsantur, eis qui iam in extremum incidunt calamitatem:* Cardan. Segm. 5. Aph. 54. You must know that the 6th. House and the disposer thereof, together with ☿, are significators of Religion and Persons, and things thereto belonging; at this time the Moon is dissortrix of the 9th. as being her house, and ☿ likewise the general significator of Religion, it being his exaltation; but both of them are very weak, poorly, and sadly pointed in ♑, which is the ones detriment and the others fall, in the 3. house, *Domus Religionis parva* in opposition to the 9th. intimating very grievous, and sad afflictions and accidents to happen to those people, things, and matters signified by ☿ there.

Metropolita fuit nuper Romanus in Auge;
Jam perigeus tenet, jam cecidisse timet.

As touching the temper of the Weather in those Parts, very great and terrible stormes of Thunder and Lightnings, with impetuous showres of Raine, Hayle, &c. The times when most eminent Transactions of Affaires, &c. in those Parts, will happen at or very neer the 19. 20. 21. of *Mar.* 21. *Ap.* 6. *May*, 22. 24. 25. *June*, 2. *July*, 5. *Aug.* 8. of *Sept.* old stile, to which if you add 10. daves, will be the *Romans* Account, besides what may be observed from the Eclipse total of the ☽, which will be seen by most of Christendome.

Of the Summer.

Aestatem Cancer, Leo trux, cum Virgine complent,
Altus sicca calet, fecundo est messibus Aestas.

Upon Friday the 10th. of *June* at three quarters of an hour past 9. of the

the Clock in the night at *London*; Ascends ♍ 25. deg. 3. min. at which moment of time the *Sun* enters the first scruple of *Cancer*: In the midheaven culminates the 28. deg. 30. m. of ♊. the Planets places are thus posited.

♄ 14 23 R ♐ in the end of the XI House
☽ 14 20 R ♑ in the midle of the XII House
♂ 14 20 ♉ in the end of the VII House
☉ 0 0 ♋ in the midle of the VI House
☿ 3 ♊ in the end of the IV House
♀ 12 40 ♋ upon the cusp of the VII House
☾ 0 8 ♉ in the end of the III House
♃ 14 27 ♌ in the midle of the VII House
♈ 14 27 ♎ in the midle of the Horoscope.

He that will please to erect the position of Heavens for that time and place, shall find it so, I forbear my Self, being straightened to so small a scindling of Paper for the whole Year; my Task at present is to make observations touching this Quarter: Without doubt *Mars* is principal Significator thereof, and hath the Moon for his partner; he is in the end of the 7th. House, occidental of the *Sun*, and hath North latitude; upon which position *Guido Bonatus in Capite 87. 4ta parte Almanach*, saies he, signifies effusion of blood, skirmishes, and conflicts in the Northern Parts; but because ☽ is in exact Trine to him, I suppose and do hope that evil may be mitigated, for *Haly* saies *cap. 9. sua parte, Si in tali constellatione evenit Jovem esse in aliqua Angulorum Martis, minuetur hæ significationes, & si aliqua harum occasionum additum precedet si Jupiter aspexerit illi*; And he doth so now, but it is by a weak Trine, though in it self it is the best of Aspects: and he saies further, *Si applicuit ite de tertio vel Sextili, significat multas cruce signatas, & hinc ratione legis*: He saies moreover, *Si Mars fuerit in signo, est malus & damnosus, quia significat inimicitias, & discordias magnas, & accident hominibus suis. Interfectiones, ac contentiones multas, in isto in illo Anno*: I suppose it is to be understood of this Quarter. *Bonatus* adds, and says, it signifies pains or dolour in the eyes, and abundance of Provision or Victuals, plenty of Wine and Butter: and because I find him to be direct in motion and in Trine to ☿, I shall joyn with *Albumasar*, and say with him, *Signi sicut honestatem, & bonum esse divitum at magnatum*. As concerning the Moon who is Partner with ♂ in this Quarter, she is excellently well posited in her exaltation, free from impediments, and placed in the end of the 3. House. *Significat bonum esse Universitatis vulgi, et maiorum et quod gaudebunt homines in amicibus, et suis consanguineis, & societatibus*. And because the Moon seperates from a Trine of ♂, and applyes to the Sextile of ♀, Lord of the 5th. There may be many Missives, Letters, Messages, Ambassies, and discourses of Trade and peace from remote Parts, aswell as neer home: but the application of ♀ to the square sinister of ♂ from a masculine signe; *Significat multas fornicationes, et magnam cupiditatem inter mulieres et viros in secreto, et contra legem*. But some will be grievously punished for the same. In this Quarter there are some notable Conjunctions,

and such who have their significators so posited, or in like aspect, shall participate of the influence thereof.

June 5 ☌ ☉ ♄ ♊ ☍ 25 degrees.
June 20 □ ☌ ☿ ♍ ♊ 23 degrees.
June 23 ☌ ♄ ♀ ☍ ♊ 23 degrees.
June 24 ☌ ☉ ♅ ♋ ♍ 15 degrees.
June 27 □ ♄ ☌ ☍ ♍ 23 degrees.
July 23 □ ♅ ☌ ♍ ♎ 9 degrees.
August 26 □ ♄ ♀ ☍ ♍ 21 degrees.
September 3 □ ♄ ♀ ☍ ♍ 22 degrees.
September 4 □ ☉ ♄ ☍ ♍ 22 degrees.

You may find the signification of these Configurations in the 5th. part of *Haly* in his judgement of the Stars, ca. 25. but being so large to insert, and my Paper so narrow, I forbear it to bring them hither.

There is in this Quarter a notable total Eclipse of the Moon, it happens on Wednesday the 27 of *July*, the figure of Heavens thereof at *London* followeth for the apparent time of the greatest obscurity, which is 11 of the Clock 25 minutes past in the night, appearing of a black or somewhat inclining to a Greenish Colour especially at the greatest darkness, beginning hor. 9. 2. min. the middle hor. 11. 25. minutes the end hor. 1. 5. min. the next morning:

So that from the beginning to the end, will be 4. hours one minute, during which time, the *Moon*'s disrobed guise of the *Sun*'s lustre, and her borrowed light.

The Effects will operate four Moneths together, from the time they begin to be in force, which according to *Ptolomy* is about the 22th. of *March*, or our Lady day 1665. and end about St. *James* tide following; but I make some doubt hereof, and with *Origanus* shall say; *Cum quaeritur, possit ubi effectus Eclipsis tum sui latere, ut post tantum temporis decursum sese exeruerat, non immerito hoc Ptolomaici Doctrina in dubium trahitur. Confirmatum namque est, Eclipses statim operari, et effectu suo aliquoties ac-*

months. As in other Lunations it hath often been experienced; I do for my part believe there will be manifest show of its operation, about *Michaelmas*, or the midle of *October*, and so continue its force till its limited time be expired as aforesaid. *Eversin necesse est Eclipsin ex ipsa propria qua contingit, impressionem facere in aere, aut eum proximum causa pomatica effectum.* I now come to such observations as our Predecessors have left us for our imitation to the benefit of Mankind: If you look back upon the Revolution of the Year, you will find the *Sun* here upon the very place of ♂ in the 15 degree of ♌, and the ☾ in opposition with the ♈ in the midheaven, which is very strange, as if God and Nature, or if you will *Natura naturans*, intended some great and wonderfull matter to be brought to passe. Without all controversie ♄ with ♈, are principal significators, the one as he is Lord of the midheaven and the place of the Moon Eclipsed, and the other of the Angle, succeeding the Eclipse, *viz.* the Ascendant, ♀ being Trigonocrator of both places, but *Venus* hath her Terms there; *Saturn* is in 12. *fere* of *Sagittary* in the tenth House, and *Mercury* in 27. *fere* of *Cancer* in the third House; the Eclipse happens in the tenth House, which is the house of Action, honours, Magistery, Magistracy, Government, &c *Messiah Caldaicus significat, quæ jam in actu sunt, et vigent in honore, ut frumenta agrum vinea, statum vitæ, Reges, Magistratus, Templa, et Arces.* The *Sun* is in opposition, as if there would be some great change or Catastrophe in those or the like things signified by that House; but to come to a more particular disquisition of the Effects of this notable Eclipse, you must know that it happens in the Airy and humane Triplicity, which presageth famine, cruel sickness, and diseases of a pestilent nature, and most part brings tempestuous and violent winds very hurtfull and destructive to Mankind; and as *Ptolomy* saith, when *Saturn* is Lord of an Eclipse (as he is at this time,) he portends much evil, corruption proceeding from cold, tedious diseases, Consumptions, Feavers, the Dropsy, *cum multis aliis*, Fears, exiles, Imprisonments, and such like. In the Aire he produceth dark, black, thick, and pitchy Clouds, Snow in abundance in proper season, Shipwracks at Sea, scarcity of Fruit, penury, damage and hurt by Locusts, Caterpillars and other venemous Creatures, violent and hurtfull storms of Hayle, death to men in years rather then to the younger sort. You may read more of this in *Merlinus Anglia Gallica, Libro 17. Cap. 3. in Tabul. de Dominio universali Planetarum. Mercury* of his own nature, forthowes dry Diseases, Coughs, Consumptions likewise, Quotidian Feavers, many Robberyes and Piracies. In that edition of *Ptolomy's quadripartite*, Printed at *Basle* 1621. published by *Jacobus Van Breitz*; I find that he significs *Institutes in Ceremonijs, Religionibus, rectitudines Regis, institutis et legibus.* And other matters as you may read there, *pag. mihi* 99. *Proclusis, Et ipse Luna in decem mediis gradibus Aquarij semente n Leda unisona.* I have been prolix enough upon this Subject, and have said nothing throughout all my discourse of this year, but have good Authority for the same, I will only remember what I have read of an Eclipse of the *Sun* which happened about 1100. years ago, *viz.* 1514. in this

very

very place where the Moon is now eclipsed, it is in M. *Henry Bunting* his Chronology pag. 490. In that year there were 4. Eclipses, three of the Moon and one of the Sun, that of the Sun is there described, and was 11 digits ec ipsed, and speaking of the effects thereof, he hath these words *Caterum quæ mala has Eclipses secuta sunt, hujus et sequentium Annorum, res gestæ satis declarant, Nam uno eodemque Anno, quo quatuor hæ Eclipses factæ sunt, qui est Annus à Nato Christo 1544 postridie purificationis Beatæ Mariæ Virginis, ad Caignanum oppidum Casalis exercitus à Gallis magna strage cæsus est. Et Paulo post in initio Maij Angliæ Regis exercitus, Edinburgum primariam Scotiæ civitatem expugnat et Arcem in ea sitam in manus dat. Sub finem Maij Cæsar hostilem exercitum eduxit adversus Francisc. cum Galliæ Regem et Angliæ Rex Henricus Octavus, ingentibus cum copijs trajecto mari, Caletum venit, post Bolonium obsidet, eamque tormentis valide concussam deditione cepit.* You may read more of that year in our Annals, Chronicles, *in Saturni Ephemerides* published by the late worthy Citizen of *London*, Mr. *Henry Isaacson* in pag. 378. to which I refer you: But if we look a little back in our own memory to the year of Christ 1646, in the height of our late unhappy times, we shall find that the Moon was eclipsed the 21. of *January* in the very opposite place to this, *viz.* in 12 degrees of *Leo*, what events followed the same I shall forbeare, *nam me meminisse dolebit*, Mr. *George Wharton* in his *Gesta Britannorum* hath a Compendium thereof, to whom I refer you, Those Persons who in their Nativities, Revolutions, or Directions shall have the Sun, Moon, Medheaven, Ascendant, and part of Fortune in 15 degrees of *Leo*, *Aquary*, *Taurus*, ♏, or within 5 deg. shall participate of this influence of this Eclipse; but because *Hieronimus Cardanus* in his Astronomicall Aphorismes, Segment 5 Aphorisme 45. sayes, *Eclipses Luminarium sapè civitates, provincias, & Regna, magis quam super privatæ conditionis homines, aut etiam super Reges, respiciunt enim multitudinem*, I will insert as it hath been often experimented those Countryes, Cityes, and Regions that are like to be passive under this Eclipse, as in the following Table.

Under

Under Leo.	Under Aquarius.	Under Taurus.	Under Scorpio.
Africa Togata or Barbary	Amazonia	Russia	Norway
Lapland	Sarmatia	Polonia the great	Babaria higher
The Tigris	Tartary the great	Swetheland nort. part	Pictagonia
Iury	Mesarbia	Iceland	Comagena
Media	Muscovya	Lapland	Cappadocia
Babylonia	Swetheland sout. part	Campania	Iamaica
Egypt as Tucky	Westphalia	Delbertia	Guinetania
Persepolis	Bosel	Rheno	Fesse the kingdo.
Sabea	Piemont	Francenia	Bethulia
Aethiopia	Babaria part	Partia	Catalonia
Nubia	Arthopia	Persia	
Indea	Bohemia	Egyptians Islands	
Sydonia	Media	Cyprus, and the maritime places of Asia the less.	

Cityes.	Cityes.	Cityes.	Cityes.
Rome	Dunbrough	Venonia	Algiers
Cumania	Berne	Pisa	Hallentia in Spain
Venetia	Shroonsbery	Mantua	Tangyers
Florence	Pilsaucum	Tarentium	Tiebon
Germain	Trent	Palermo in Sicily	Aquilegia or Aleas
Pisa	Saltsburg	Pergouse in Hetruria	Forum Iulii
Canterbury	Ingolstadt	Parma	Bullorium
Pyrene		Caput Istriae	Camerinum
Italy		Bergin	Tarbitum
Granada		Tuguce Lipsig	Bellona Caunt
		Lucense Carina	Tiebona
		Genoy	Bethlant
		Venus	Ausheim in Bab.
		Tecolisade	Frankfurt upon
		Subogadae	Oder.
		Poinania	

There are three other Eclipses, *viz.* two of the *Sun*, and another of the *Moon*, to be seen by the Inhabitants of the Earth; Those of the Sun are small and scarce worth notice; The other of the *Moon* will be on Monday the first of *February*, at four a clock 37. minutes after noon, and there cannot be seen by us; but those People that are East from *London* 9. houres and 34 minutes, and under the Longitude of 161 degrees, shall see the *Moon* totally Eclipsed in their Meridian; with be those that inhabit in the remote Eastern parts of *Tartary* the great, *China*, *Japan*, the *Phillipine* Islands, the *Moluccas*, new *Guiny*, *Iava*, *Beach*, *Quivira* &c.

Touching that Eclipse of the *Moon* I have diligently perused of, *Italy*, *Greece*, *Hungary*, the lower *Germany*, *England*, *France*, *Spain*, *Africa*, with the Islands in the *Atlantick* and *Aethiopian* Seas, as also the South part of *Sweathland* shall behold it from the beginning to the end. And yet this Eclipse is not so much as mentioned by *Argol* the prime Calculator of *Italy*, unless it is misprinted, which I suppose not, for he mentions it twice in his Ephemeris; and *Riccioli* followes him in his *Almagestum novum*, but in his *Cron Geographica* he hath corrected him, and so hath our Country

ery man Mr *Wing*: There may a great deal of Water go by the Mill, the Miller knows not of; and many accidents and occurrences happen which the best Artist in the World may be ignorant of, yet come to his eares. *Quapropter Horior jucundissimæ et visissimæ Philosophiæ Prognosticæ additos; ut sedulam navant operam in Astrorum effectibus: et ab experientia non futili aliorum aut judicia petam. Hæc enim ratione Nobilissimam hanc Artem à calumniatoribus (qui cum ipsimet hac in re nihil egregij præstare possint, decendo alijs sibi laudem quærunt) vindicabunt, Artisque fidem, et famam asserabunt.*

Of the Harvest.

Scorpius Autumnum, et dup ici cum Luce, Sagitta,
Musca dat et morbos Autumnus siccat et algor.

Upon Monday the 12th. of *September*, this Year 1664. at 53 minutes past 10. of the Clock before Noon at *London*, doth arise the 19. minutes of the malignant signe *Scorpio*, and the midheaven is posited by *Virgo* 11. degrees 49. minutes, at which moment of time the *Sun* entreth the Æquinoctial Signe *Libra*: As in the last Quarter you the places of the Planets, so I shall do in this, and then I shall part my Collections and Observations, leaving to insert the Scheme of Heaven upon the former reasons.

♄ 22 6 ♐ in the II. House.
☿ 8 18 ♍ in the II. House.
♂ 12 24 ♏ in the XII. House.
☉ 0 0 ♎ in the X. House.
♀ 3 15 ♎ in the X. House.
♃ 18 28 ♎ in the XI. House.
☾ 5 9 ♏ in the XII. House.
☊ 9 29 ♌ in the IX. House.
☋ 9 29 ♒ in the III. House.

Mars is very potent still, for he is Almuten of the Ascendant, and the place of the *Moon*, he is neer the bright Star of the south Balance, his own, and his brother in iniquity *Saturns* nature; he is posited in 12th. House, the house of private enemies, sorrow, tribulations, imprisonment, all manner of afflictions, and of such persons that maliciously undermine their Neighbours, or informe secretly against them, which he will do to the purpose at this time; for he is in his own Signe and dignities, he is not far from the *Moon*, and though she be elevated above him, yet she is in a very sad condition; *Mercury* hath a great share likewise, but in a far better posture, he is Lord of the midheaven, and in Conjunction with the benevolent Star *Spica Virginis*, and under it, is a notable Star, of the nature of himself and *Venus*; but the latter, just going from the *Sun*, of all which somewhat may be said. For *Mars* being thus posited, *Haly* in the 8. part and 7. chap. Says, *videnti motus et damna multa à suis inimicis, & fundunt inter se prælia guinem, et Rixas alent. Guido Bonatus* sayes, *chap.* 93. *part* 4. *latitudo ejus meridiana*, as now it is, and ascending. *Signifi* *ntem Aquarium fontium*. And in Chap. 85. of the same part,

ries, significat ingenia in latrocinijs: As if he should have said there will be store of Pick-pockets, but the Gallows is their Pulpit: *Significat diminutionem substantiarum hominum, et maiorem et tristitiam quam causa magnarum Animalium, tam illorum, quæ equitantur, quam quæ non equitantur, nisi Deus avertat.* This may be understood of the death of great Cattle, as mischeif to be done by them, which is usually done in this great City of *London*. I suspect both; He sayes that if he shall be Occidental, as now he is, *Significat pauci nam pecuniorum adinnicem*, which I believe will prove too true in these hard and worst dayes that have been in my time, or the eldest man living!

Nemo laborantis, nemo miseresit egeni,
Omni in humano corde refrixit Amor.
Irrigitur, sacrum fides, eamdemque revellit,
Vile fremit lingua, pectora felle tument,
Fœdera, contractus, conventicia, pacta, Fortunæ
Mille fubimatibus pervia, mille dolis.
Non modus in victu, non est in vestedecorum,
Cuncta luxuries, impia mentis opes.

Concerning the *Moons* being with *Mars* in *Scorpio* in the 12th House. The position the e could hardly be a worse. It is to be feared which position the e could hardly be a worse. It is to be feared that Sorcery or Witchcraft may be used, and many Venifices practised, but I trust in God they will be discovered in due time, and have their reward. It also signifies some eminent Martialists to come into trouble, captivated, imprisoned, and consignly punished for some haynous fact, or treachery perpecrated. *Etiam significat ruinores falsos, sanguinum effusiones, et mendacia multa.* *Mercury*'s position in the 11. House with a favorable Star before remembred, advanceth some excellently well qualified Mercurialist to some high and Honourable Preferment, and that he shall be in great favour and esteem: And applying to *Saturn* by Sextile, Holy saves, *Significat quod homines qui merantur in domibus suis, dant se lectioni librorum.* This is no bad exercise, so the Bookes be good. He signifies high and ruffling Winds: In this Quarter, some Configurations happen.

September 16 ☌ ☽ ♀ 9 ♍ ☆.
September 21 ☌ ☉ ☿ 9 ♍ ☍.
October 19 ☌ ♀ ♃ 20 ♏.
November 12 ☌ ♄ ☌ 27 ♐.
November 19 ☌ ♄ ♀ 28 ♐.
November 27 ☌ ☌ ♀ 8 ♍.
December 11 ☌ ☉ ♄ 0 ♍.

In the Summer Quarter I told you where you might find the significations of these Aspects and Conjunctions, to which I referre you; only one thing I will add upon the Conjunction of *Saturn* and *Mars* in this Quarter, *Cum duæ infortuna jungantur (inquit Rasis) in signe cum quo habet Longitudinem, nam si cum Saturno, erit fames, et lues; si cum Marte frages, cades, et regnorum permutatio.* This is in Aphor. 91. pag. 5. of *Cardans* Aphorisms. At the *Moons* last congress with them, *Saturn* had no degrees 52. minutes north Latitude, *Mars* had 0. degrees

58.

58. minutes South latitude; the *Moon* 3. degrees North descending, and this was the 10. day of *November*; but the 12. day when they had Conjunction the *Moon* hath 28. minutes of North latitude; so that according to this observation the *Moon* agrees with *Saturn*, and it is to be feared the more because *Saturn* is elevated above *Mars*, if this be so, so it is, We had all need to say our Letany, *A fulgore et tempestate, a plaga et pestilentia, fame, bello, latrocinio, & morte subitanea: libera nos Domine.*

Of Winter.

Deinde Hyemi Pisces, Capricornus, Aquarius ad sua,
Ægret & humet Hyems, glacie et nive flumina stringit.

Upon *Saturday* the 10. of *December* 1664. at one minute past the following midnight, 11. minutes of ♎ doth ascend at *London*; so that necessarily the 4. Cardinal Signes must possess the 4. Angles of Heaven: if you erect the position of Heavens for that time, you'l find a strange face thereof, for 5. of the Planets, *viz.* ☉ ♄ ♂ ♃ ☿, are all in ♑ in the 4. house: ♀ is in 22. 16. of ♐, and the ☾ in 8. 31. of ♒; all of them subterranean and not to be seen by *Lyncem* himself. We may now expect this and the ensuing Winters to return to their kind: ♄ will be in his own Houses from this time till the 22. of *February* 1670. almost 6 years. It is true there may happen configurations amongst the Planets, at the ☉ his ingress into this Cardinal point, the Winter Solstice, during those years, which may cause some notable mutation in the Aire; which if God spare my Life, I shall observe, and communicate the same, hoping my labours therein shall find acceptance. I will at this time tell you, That whensoever the *Sun* enters an Æquinoctial or Tropical Signe, and shall immediately joyne with or apply to a Star of a frigid and cold nature, as to ♄, or ♀, he signifies a colder state and temper of the Aire, then hath formerly been. At this time, the *Sun* doth immediatly joyn with ♄, and ♄ is but newly entred ♑ his own Sign, which is of a cold, dry and terrene nature; and whensoever he doth so, he assuredly brings cold and hard Weather, much Snow and Frost. For the undoubted Aphorisme is thus, *Saturnus in proprio suo domicilio, Capricorno, vel Aquario, in themate Hyemali constitutus, intensum et insuetum permodo frigus.* We have had manifest experience thereof, many years passed, and it is yet fresh in our memories. Touching civil affairs, or else what may happen in this Quarter, I forbear it, it being that Season of the Year, wherein there is little of Action, saving sitting by a good fire, &c. to drive the cold Winter away. In this Quarter notable Configurations happen, as I say in the proceeding Quarter the two malignants met together: So in this, *viz.* the 8. of *December* do joyne the two Benevolents, ♃ and ♀ in 22. degree of ♑; they may be seen in the evenings in the West presently after *Sun* set, it the Aire be clear, very neer together, and ☍ hard by them; and the *Moon* with all three, the 9. of *December*: ♃ is elevated above ♀, and the ☾ ag eeth neereſt to ♃ in latitude, yet is she mounted above them all. It is worth the while to behold this notable meeting which is rare. *Ptolie* says, if up n such a Conjunction, *Luna Jovi conveniens in latitudine eris in justitia et quies ♃ si Veneri gaudium volupt:* Which God grant, and send us a merry Christmas.

Sa-

Configurationes Notabiles.

December 8 ☌ ☿ ☍ ♀ 22 ♍.
December 11 ☌ ☉ □ ♄ ○ ♍.

February 6 ☌ ♂ ☍ ♀ 4 ♓.
February 7 □ ♄ ☿ ♃ 7 ♑ ♈.
February 9 ☌ ☉ ☍ ♀ 1 ♓.
March 4 ☌ ☉ ☌ ♂ 24 ♓.

I have in the precceding Quarters told you where you may find the significators of any these Conjunctions and Aspects, I shall referre you to the same again, I have forborn to do the same and to English the Latine *Nam supervacaneum esse dixi, neliber in immensum excrescere;* And I must not transgress my Bounds, I could wish it were otherwise.

It may be expected I should say somwhat of the so much talkt of conjunction of *Saturn* and *Jupiter*: I have finished this Years Observations before the apparent Conjunction, and therefore shall say the less, because I understand a particular Treatise is in hand concerning the same, and ready for the Press; I love not to forestall any man. I shall refer you to my Observations the last year upon the same, it is too much to repeat; yet I hope is not so soon forgot: Hereafter God willing you may expect more from me concerning the same. I hope it will be diligently observed either at home or abroad: There were never abler Artists in the World then at present: yet all Tables extant want a grain.

Ab sunt sal ex nimium, vinium, beati
Astronomi illustres, sunt si bona cani horint.

I have no more at present to say, but this,

RoMæ DestrVCtIo fInaLIs approprInqVat.

Carole Rex Vivat, Vivant Catharina, Maria,
Conjux & Mater: Vivat fraterq; Jacobus.

Vivat Rex. Floreat Lex. Vigeat Grex. Crescat Pax.

Quam benè dum Caput est salvum, salva omnia Membra.
Ergo ut Vivata Membra, foveie Caput.

LONDON,
From my House in St. James
Duke's place near the Church.

September 16. 1663.

FINIS.

ADVERTISEMENTS.

All sorts of Mathematical Instruments made and sold by *Walter Hayes* at the Cross-Daggers neer the Popes-Head in More-Fields, with Bookes for the use of them.

New Globes, Cœlestial and Terrestrial of several sizes, Spheres according to the Hypothesis of *Ptolomy*, *Copernicus* and *Tycho*, the Mathematical Jewel neatly made on Pasteboard with Bookes for the use of them, Mappes great and small of all Countryes, Sea-plats for all Navigations, Drawing of any particular Persons Land, made in St. *Michael's* Church Yard in *Cornhill*, by *Joseph Moxon* Hydrographer to the KING'S Most Excellent Majesty: If any Person though never so remote in the Country, desire any of the said Commodities, he may, if he sends by the Carrier, have the real lowest Prizes, which if he likes of, he shall in his next return be as well accommodated as if himself were present.

Tutela sanitatis sive vita proracta, The protection of Long Life, and detection of its brevity from Diæteticall and common customes, with a Treatise of Fontanels and Issues. An excellent Treatise replenished with rare secrets against the Invaders of Life, fitted for all Persons with the safe use, by *Everard Manwaring* Doctor in Physick, sold by *Samuell Thomson* at the *Bishops* head in S. *Pauls* Church yard.

The secrets of Palmistry disclosed, together with a necessary piece of Astrology concerning Elections by *Rich. Saunders*, sould by *George Sawbridge* at the Bible upon *Ludgate*-hill.

Consultum Sanitatis, A Directory to health, by *Roger Drake* Master in Chirurgery.

Theomagia, or the Temple of Wisdome, containing the Occult power of the Angels of Astromancy, The Virtues of the Characters of the Stars, Figures or Geomancy, The Resolution of all manner of Questions, The Holy Guide or English Physirians Tutor in Rosycrucian Medicines performing extraordinary Cures, by *John Heydon* Gent. now published and Sold by *Henry Brome* at the Gun in Ivy-lane

Roma triumphans sinoris; An excellent Treatise in *Latin*, pointing at the ruine of *Rome* to be at hand. To be Sold by *John Sherley* at the Sign in *Little-Brittain*, and *Samuel Thomson* at the *Bishops-head* in the Church-yard.

The Wits, or Sport upon Sport: In select pieces of Drollery, fitted for the pleasure and content of all Persons: The like never yet Published. To be Sold by *Henry Marsh* at the Princes Arms in Chancery Lane neer *Fleetstreet*.
